LETTER OF ASSESSMENT

Beyond Binary was engaged by Atlassian to conduct a comprehensive security assessment of Jira Product Discovery. The assessment was performed by one security consultants from late April 2024 through to May 2024.

Beyond Binary conducted code-assisted dynamic web application penetration testing on the Jira Product Discovery application hosted within Jira Cloud. Beyond Binary maintained regular communication with the Atlassian security team and developers throughout the engagement to report identified issues and better understand security impact.

Beyond Binary had access to all source code repositories for the application and communicated regularly with Jira Product Discovery engineers to assist in understanding the application and its code. The testing was performed by reviewing the application source, and by dynamically analysing and tampering with web traffic in an interception proxy, both manually and using automated tools.

Beyond Binary helps companies take responsibility for securing their systems and networks in a time when technology moves faster than even the most vigilant businesses can keep pace with. Companies are ultimately responsible for protecting their own data and the personal information of customers, and mismanagement of this critical area can have a crippling impact on business.

Our team have been involved in the delivery of a wide range of security services, including penetration testing, red team engagements and attack simulations. What really differentiates us though is our extensive background in software engineering, the production of large and complex systems, and the maintenance and support of systems after deployment. Our offensive security work leverages this background knowledge to gain deep insights into the architecture and intricacies of systems, and how an attacker might exploit them. In short, we can see things from the perspective of both the builder and the breaker.

Sincerely,

Silas Barnes
Senior Partner - Offensive Security Services
