

Enterprise-grade apps for your enterprise-grade tools

Data Center approved apps

The Data Center approved apps program ensures that apps are purpose-built to maintain consistent performance, stability and security in enterprise environments. Data center apps must pass a 150+ question architectural review and meet app development and testing criteria. This includes elements of how apps handle cache operations, support required databases, implement locking and availability in clustered environments, manage event handlers, and more.

93%

There are currently over 600+ Data Center approved apps and growing fast. 93% of the top 100 apps used by Server customers are available as Data Center approved versions.

Performance at Scale

All apps are tested to perform consistently in enterprise-scale environments including 1, 2, and 4 nodes.

Reliability when it matters

Critical issues are over 3X less likely to occur when using a Data Center app.

Simplified Licensing

Data Center apps follow the same annual subscription model as your Data Center product and align with your Data Center user tier.

If there ever is an issue with Data Center apps, we have you covered. Atlassian provides an [app escalation channel](#) to help with any unforeseen issues.

Easily evaluate Data Center apps with unique evaluation licenses to make sure you enjoy your product.
