To Whom It May Concern,

**Letter of Assessment**

From 28th of April to 28th of May 2021 pursuant to our agreement with Atlassian Pty Ltd, elttam conducted a security assessment of Micros images and KITT images, including their build and deployment processes.

The engagement commenced with a kick-off meeting to confirm access and project scope and a walk through of the product. The assessment was performed by a team of two consultants over the assessment period following a white-box methodology using a combination of dynamic testing and code-review. This review involved understanding the contents of the images in the building blocks of both platforms, evaluation of their security maturity such as OS level security, default services, central logging, default packages and key security policies, and review of the security of their CI/CD. The output of the work provided detailed findings and hardening improvements along with commentary and recommendations for both platforms. The engagement was wrapped up with a close-down meeting and a report was issued to Atlassian.

elttam is an independent security company providing research-driven security assessment services to the Fortune 500, global financial institutions, leading technology companies, Australian Federal Government and up and coming technology start-ups. We combine pragmatism and deep technical insight to help our customers secure their most important assets.

Sincerely,

Nina Rodgers
Operations Manager
